

Assignment No. 7

Experiment Title: Exploring different tasks on Tableau

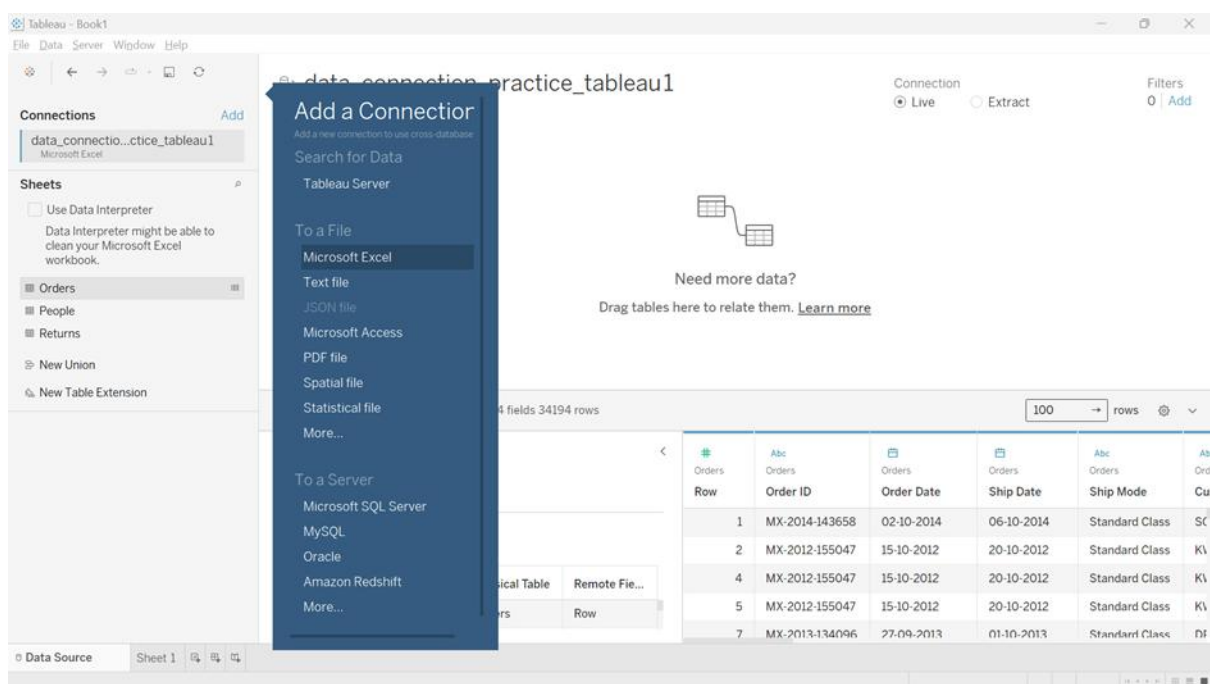

Problem Statement:

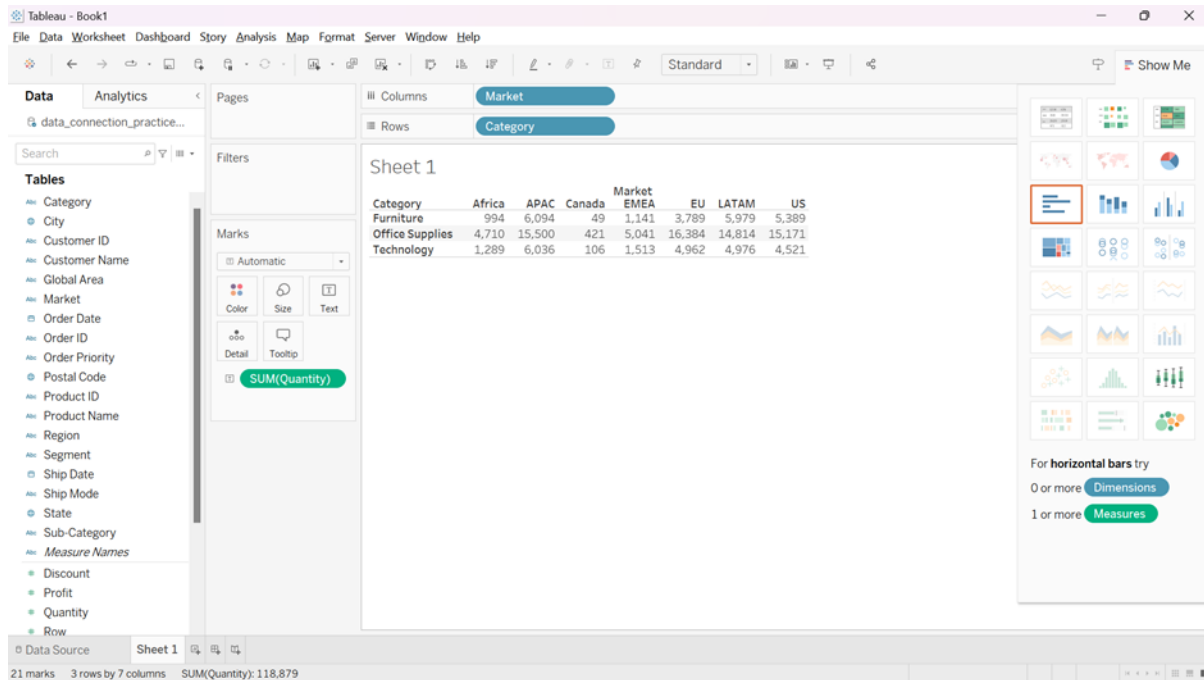

Explore different tasks for data engineering on a given dataset using Tableau

- Connecting to data and preparing data for visualization.
- Data Aggregation and Statistical functions
- Data Visualizations
- Basic Dashboards

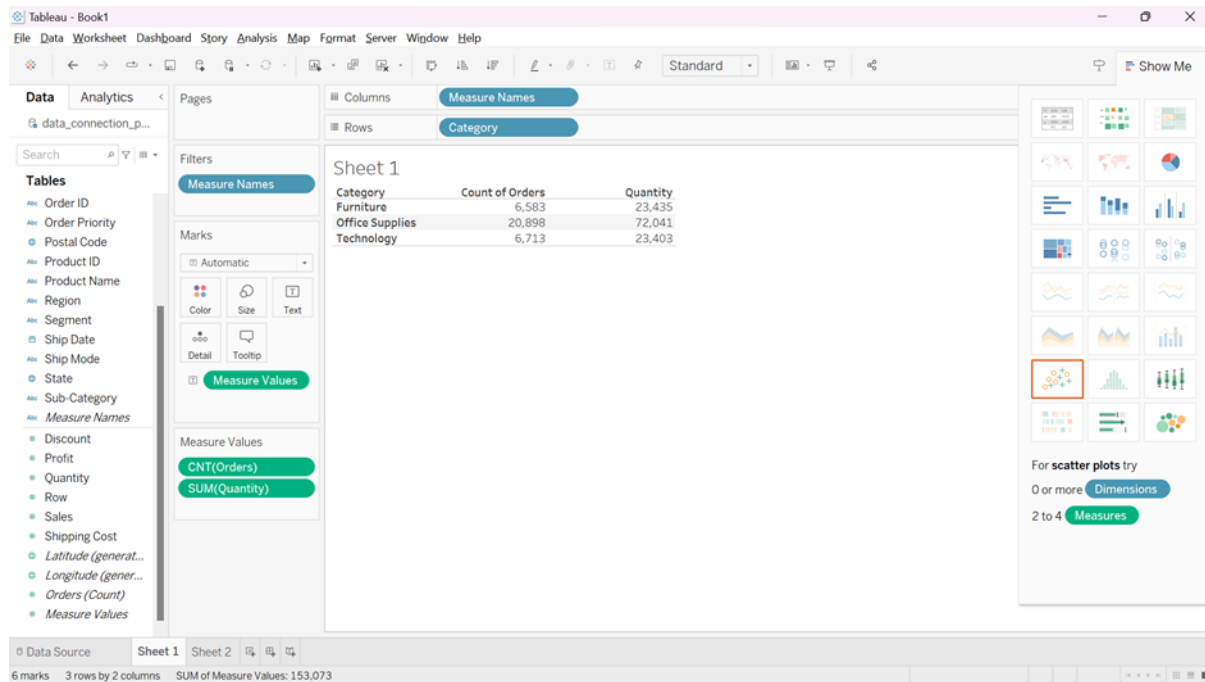

Theory:

1. Data Connection and Preparation

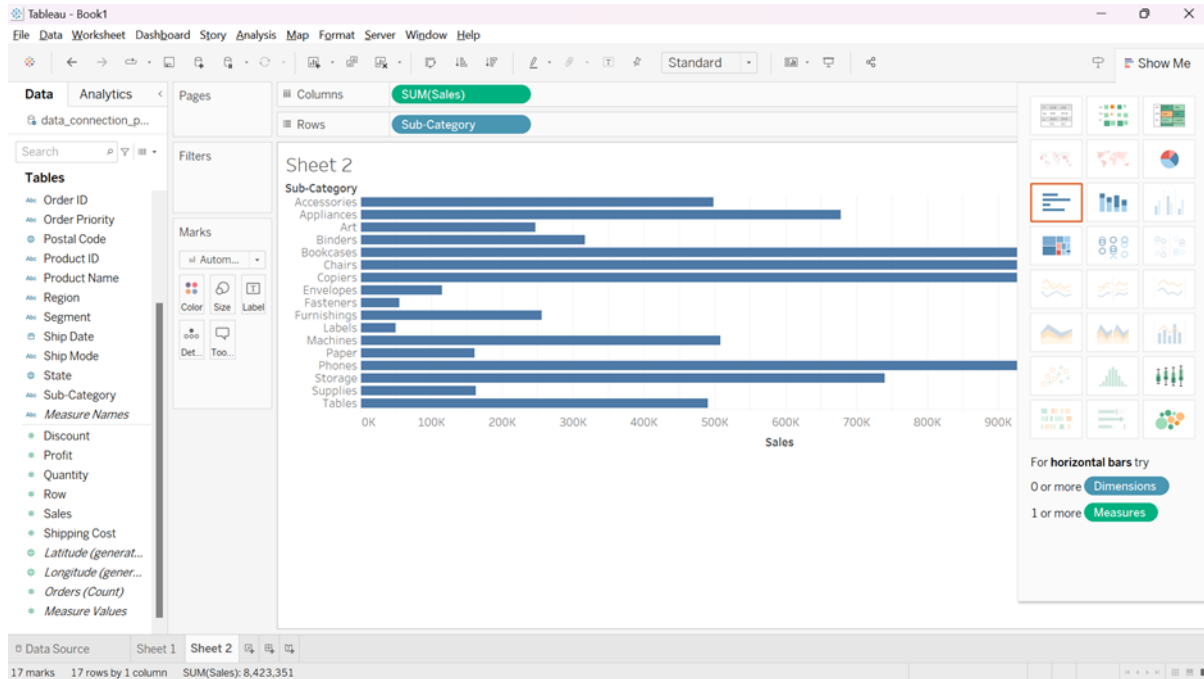

2. Data Aggregation and Statistical Functions

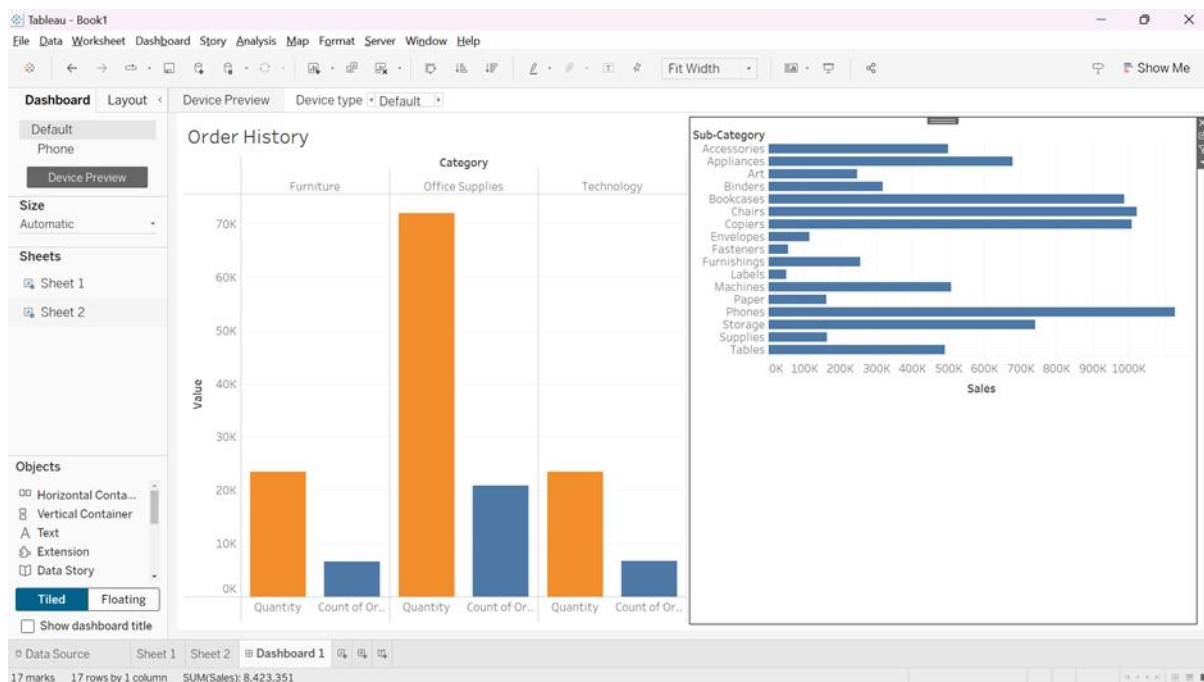

3. Data Visualizations

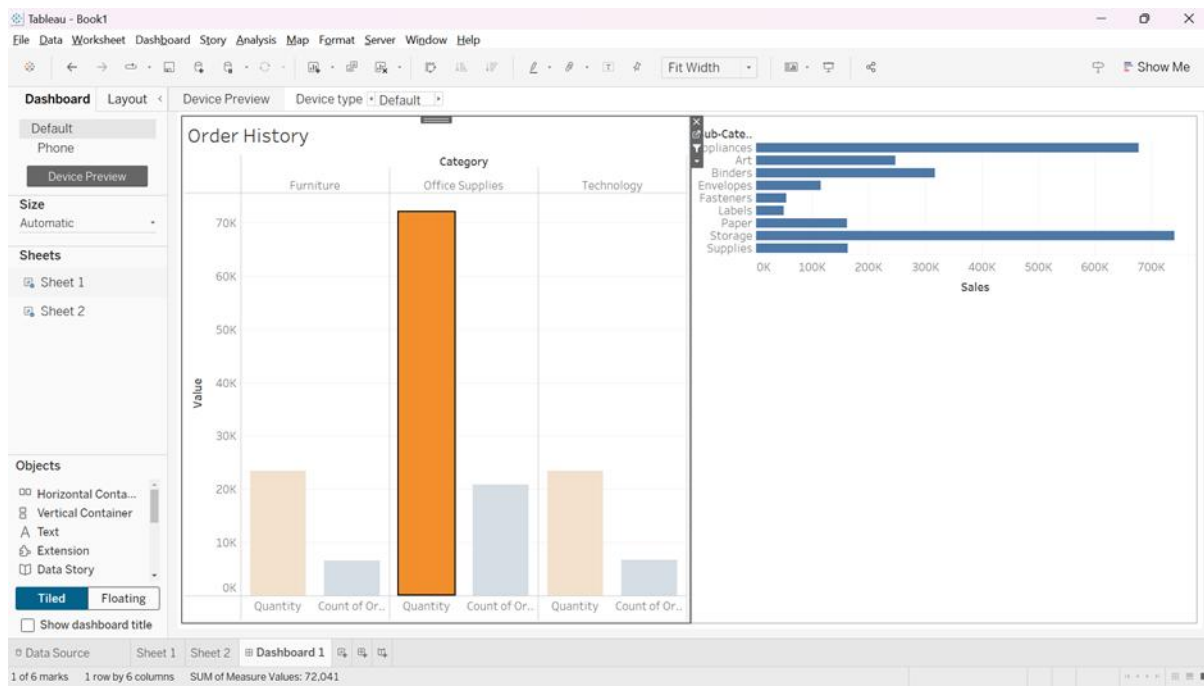

Multiple ways to visualize data based on requirements such as pie chart ,table format , heat maps the one below is of a bar graph

4. Basic Dashboards

Relation between the 2 tables

Conclusion: In conclusion , Tableau simplifies data engineering tasks by providing a seamless process for connecting to, preparing, and visualizing datasets. Through data aggregation and statistical functions, users gain valuable insights, while informative visualizations and basic dashboards enhance data exploration and decision-making. Tableau's comprehensive approach streamlines workflows, enabling users to extract actionable insights efficiently and drive business success
