

Assignment No. 9

Experiment Title: Exploring different tasks on PowerBI

Problem Statement:

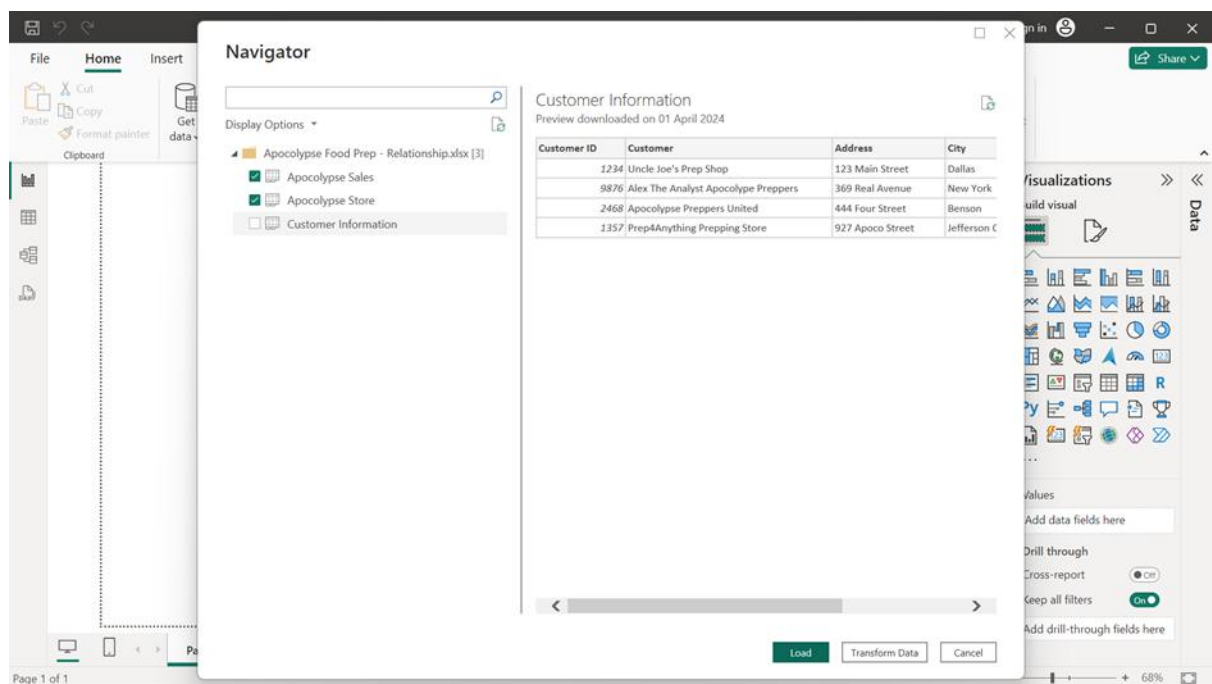

Explore different tasks for data engineering on a given dataset using PowerBI

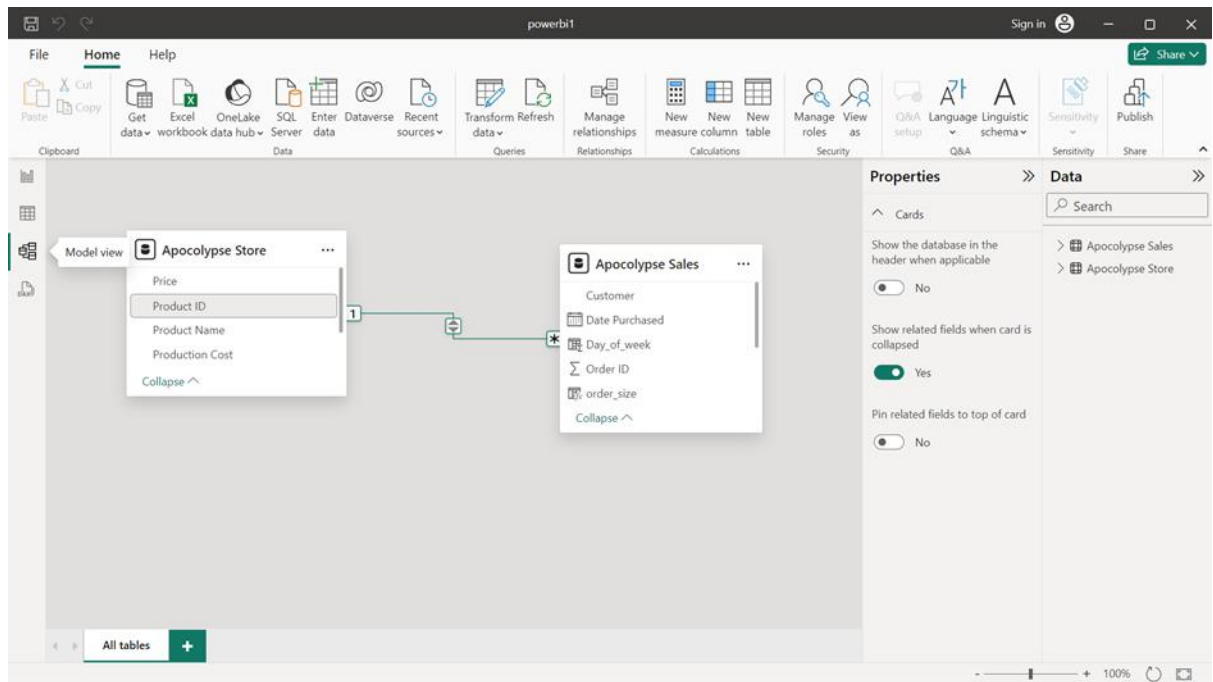

- i. Connecting to data and preparing data for visualization
- ii. Data Aggregation and Statistical functions
- iii. Data Visualizations
- iv. Basic Dashboards

Theory:

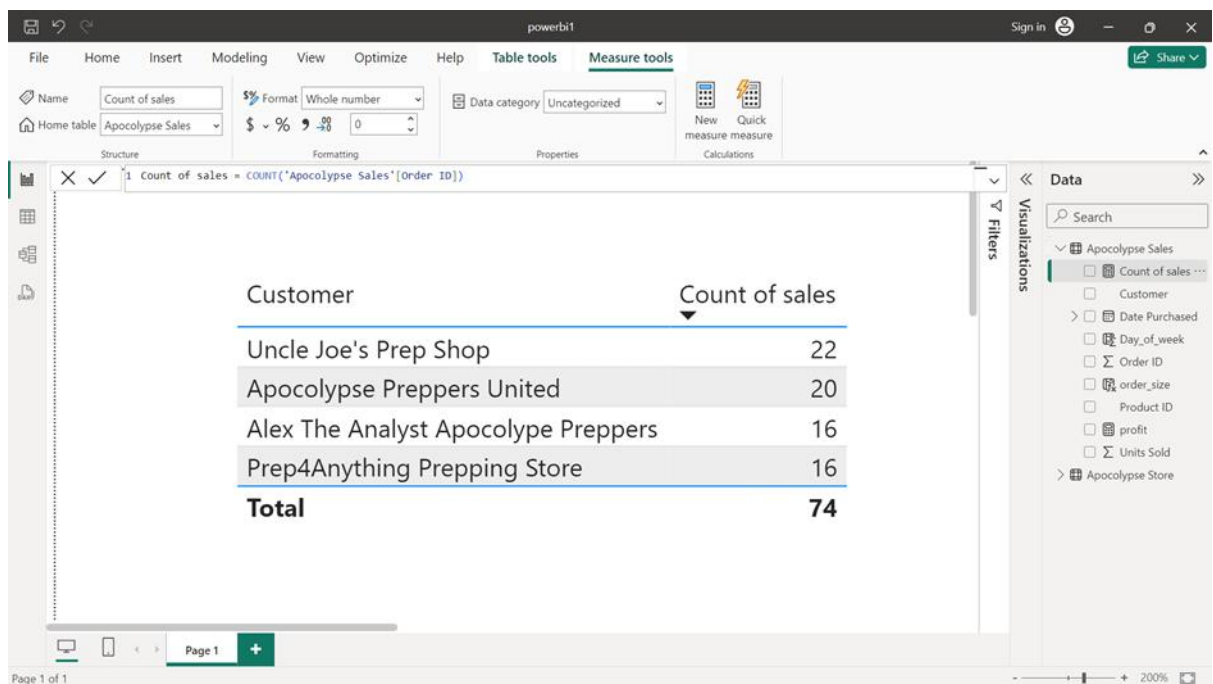

Using Data Connection Practice dataset

1. Connecting to data and preparing data for visualization

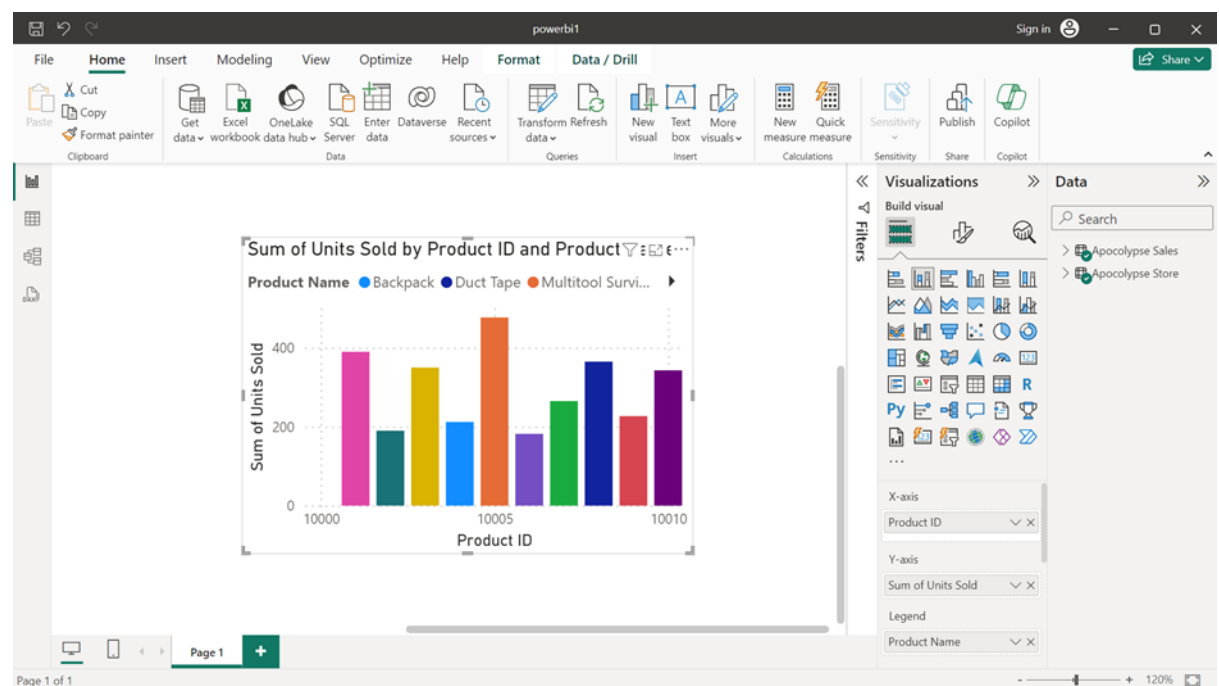

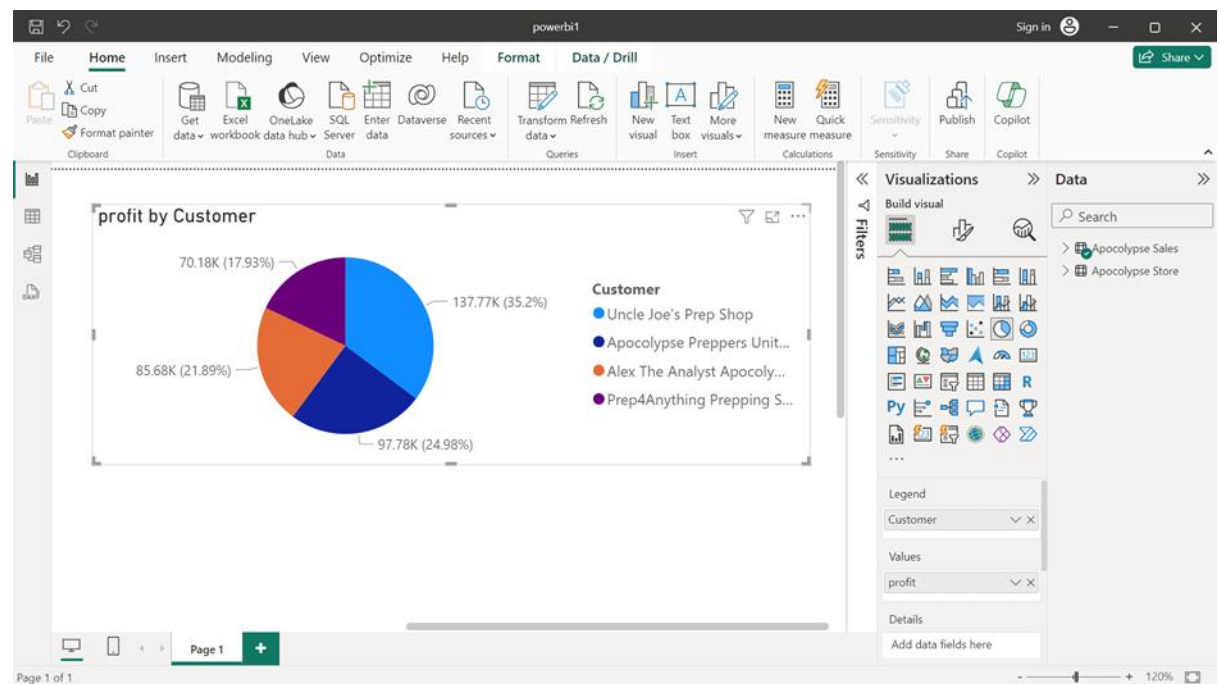

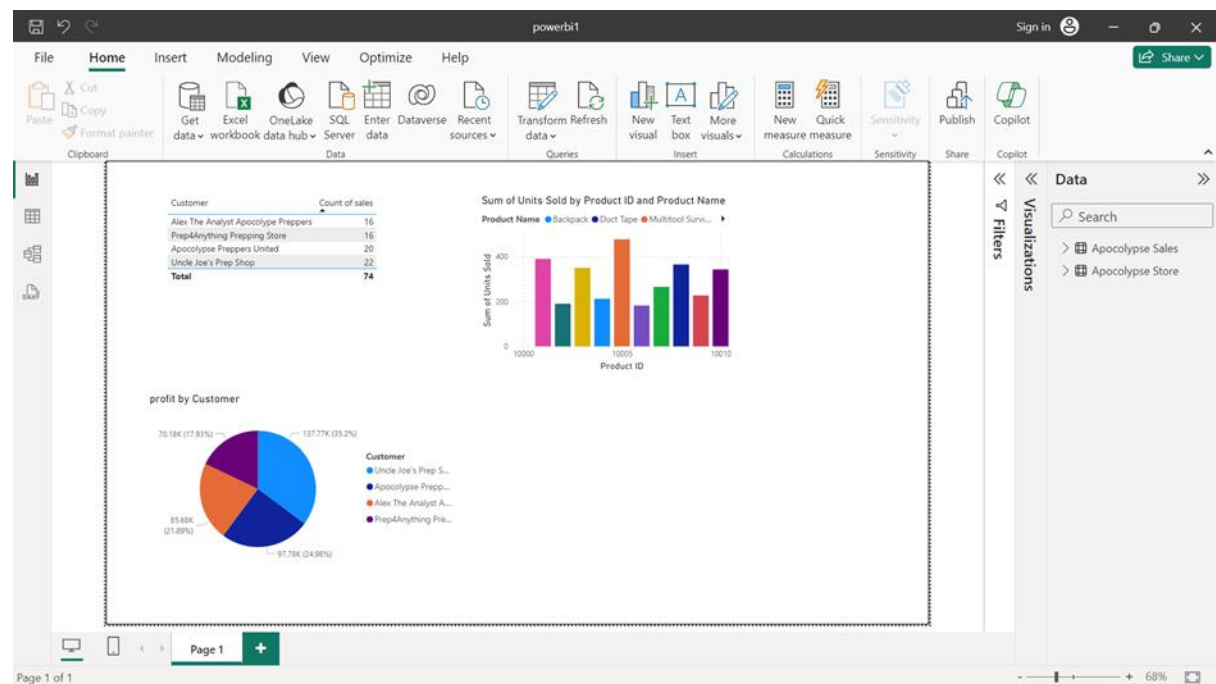

2. Data Aggregation and Statistical functions

3. Data Visualizations

4. Basic Dashboard

Conclusion: In brief, Power BI offers a robust platform for data engineering tasks, including connecting to data sources, preparing data for visualization, performing data aggregation and statistical functions, creating impactful visualizations, and building basic dashboards. Its intuitive interface and powerful features enable users to efficiently analyze and visualize data, facilitating informed decision-making and driving business insights.
